RSP-6004/5

Handheld Smart Probe

The unique round-headed silhouette of the RSP-6004/5 suggests the special properties of this extraordinary Smart Probe. Offering the same robust features and functionality of the standard SP-6004/5, the distinctive shape of this Round Smart Probe produces a broad reading field, which makes scanning large or isolated animals quick and easy.

Specifically designed for the 6000 series, the groundbreaking RSP-6004 and RSP-6005 handheld scanner is a fully integrated data acquisition instrument, which we call Smart Probe. Why smart? The sophisticated, revolutionary design combines reading and processing into slim, lightweight wands. For the first time, with the Smart Probe, RF data processing takes place inside the probe itself, facilitating complete and easy automatic computer integration of RF animal identification and associated data.

Your choice of transponder determines the Smart Probe required; use the RSP-6004 for the IMI transponder and the RSP-6005 for the IPTT / IPT. Mounted on a stand or handheld, the Round Handheld Smart Probe offers two scan modes—continuous and momentary—at the touch of a button. DASHost™ communications software facilitates updates, collects data, and inserts data directly into Microsoft Excel™ or other applications while enabling you to send, clear and access map files.

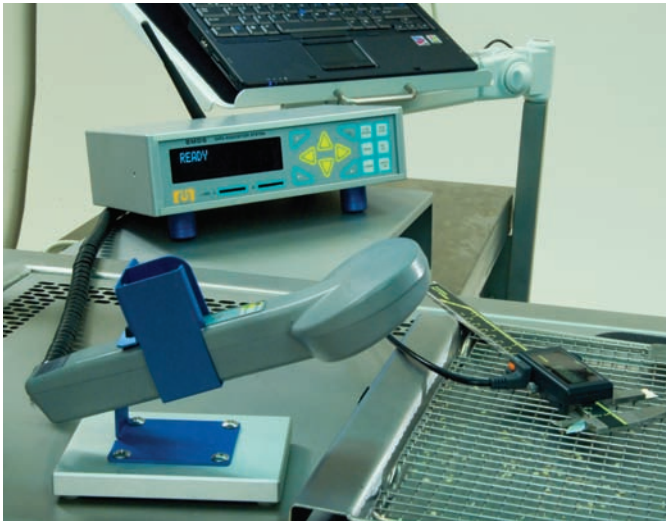

SP-6004/5 is used in conjunction with the DAS-6001,6002, 6003, 6008, 6010 systems.

Features & Benefits

- Use RSP-6005 Smart Probe with the programmable read/write IPTT / IPT transponder
- Use RSP-6004 Smart Probe with the standard IMI transponder
- Command structure follows the format established by DAS-5003 series
- Digital protocol designed for error free interfacing and communications control
- DASHost™ communications software provides easy integration with your application

RSP-6004 and RSP-6005 Fuctional Overview

Streamline your workflow; use handheld or hands-free

Broad reading field makes scanning easy
